[Modules](#) · [Content display](#) · [Taxonomy](#) · [Utility](#)

The taxonomy_image module allows site administrators to associate images with taxonomy terms. With the association created, an admin can then make a call to 'taxonomy_image_display()' from their theme or other PHP code to display the appropriate image.

The module allows the admin to create a one-to-one term-to-image relationship. With image display recursion, it is also possible to create a many-to-one relationship. This is useful if creating taxonomy hierarchies in which an entire tree of terms will use the same image. With recursion enabled, you only need to associate an image with the tree parent, and all children will automatically inherit the same image.

Features:

- Image configuration happens within existing admin/taxonomy menu structure.
- Admins can add custom tags to markup when displaying images.
- Allows one-to-one term-to-image relationships.
- Allows many-to-one term-to-image relationships.
- Admin-permitted users can disable the images.
- Administrators can force images to be a standard size.
- May use the ImageCache module if it is available.
- Works with Views.
- Utilizes core file.inc and taxonomy.module APIs.
- Small module with specific, focused functionality.
- Add-on modules that virtually eliminate the need for theme changes.

It is always best to request permission before posting a picture that might be copyrighted or trademarked and to post a proper attribution if necessary.

Usage statistics for *Taxonomy Image*

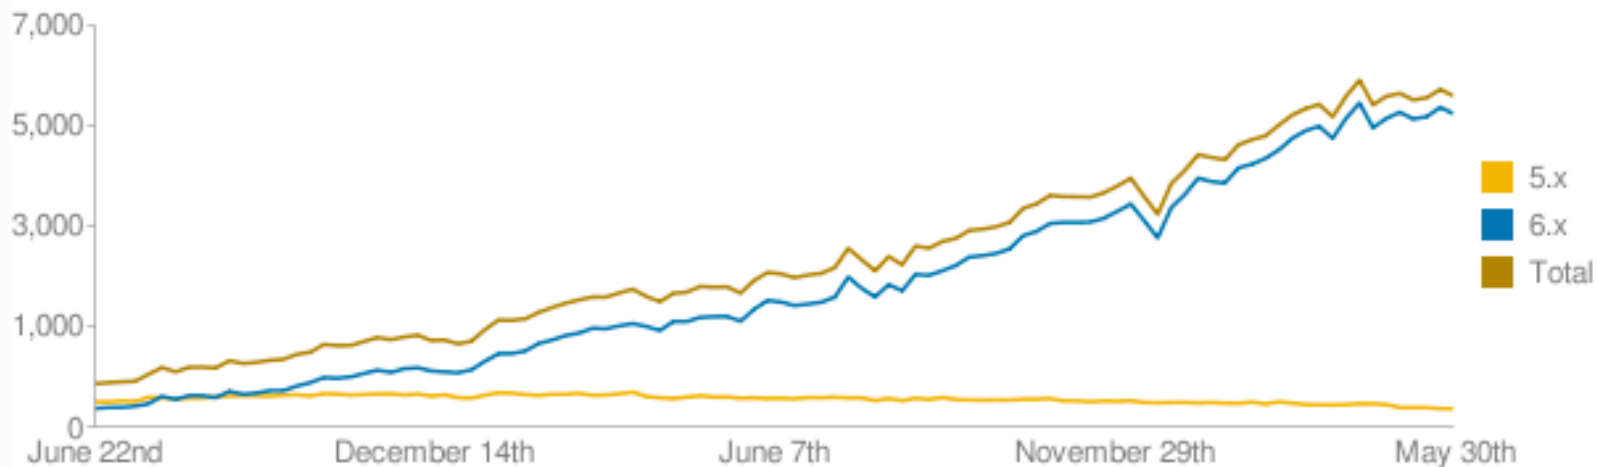

This page provides information about the usage of the *Taxonomy Image* project, including summaries across all versions and details for each release. For each week beginning on the given date the figures show the number of sites that reported they are using a given version of the project.

These statistics are incomplete; only Drupal websites using the **Update Status** module are included in the data. As this module is now included with the download of Drupal since version 6.x, the data is heavily biased toward newer sites. [Read more information about how these statistics are calculated.](#)
